

COLLIN CREDO

Energy Engineering Intern

(209) 346 - 4602

Davis, CA 95616

cgcredo@ucdavis.edu

[linkedin.com/in/collin-credo/](https://www.linkedin.com/in/collin-credo/)

Aspiring Aerospace Engineer and current UC Davis student with hands-on experience in building automation and energy engineering. Proficient in Siemens Controls, PPCL, and SkySpark, with more than a year's experience of analyzing HVAC systems to identify energy-saving opportunities. Committed to developing efficient, sustainable engineering solutions for complex building systems as a future controls engineer.

PROFESSIONAL EXPERIENCE

UC Davis: FM Energy Engineering - Intern | Jan 2025 - Current

- Perform diagnostic analysis on campus HVAC systems to identify operational inefficiencies and recurring mechanical issues, ensuring optimal building performance.
- Develop customized SkySpark dashboards for multiple campus sites, utilizing data visualization tools to analyze energy consumption trends and operational patterns.
- Manage large-scale data integration by utilizing SQL databases and RegEx to accurately import and map 12,015 data points into SkySpark for in-depth analysis.

Grand Theatre Center for the Arts - Program Assistant | May 2023 - Sept 2024

- Managed high-volume box office operations, facilitating ticket sales for over 10 events per month through VBOTickets and class registrations via the ActiveNET platform while providing excellent customer service.

EDUCATION

University of California, Davis | Sept 2024 - June 2027

Aerospace Science and Engineering Major | Thermodynamics, Fluid Mechanics | Video Game Orchestra - Bass Clarinet

San Joaquin Delta College | Jan 2021 - May 2024

AS: Mathematics and Science | AA: Art, Humanities and Social Sciences | High School Dual Enrollment Program

ACTIVITIES AND HONORS

Vertical Flight Society (VFS) - Member | Oct 2025 - Current

- Collaborating on a student design competition team as a performance analyst to retrofit a hybrid-electric engine into a rotocopter utilizing NDARC and OpenVSP for vehicle sizing and performance analysis.

CFD Analysis: Reheat Valve Leakage | UC Davis (Winter 2026)

- Modeled a Giedt Hall globe valve with a 0.3mm plug-to-seat gap using Onshape and simulated fluid dynamics in SimScale, identifying a significant leakage rate of 3.36 GPH
- Quantified the resulting cooling efficiency degradation and subsequent energy waste on the Air Handling Unit (AHU) to bridge fluid mechanics theory with real-world campus facilities management.

SKILLS

CAD/Analysis:

- SOLIDWORKS, OnShape, NDARC, OpenVSP

Building Automation:

- SkySpark, Siemens Controls, Desigo

Programming & Databases:

- Python, SkySpark Axon
- Siemens PPCL
- SQL
- RegEx
- MATLAB
- Javascript

General & Certifications:

- Microsoft Excel, ActiveNET, Budget Management
- HSI CPR and First Aid Certification
